Decoding Words with Digraph sh

OBJECTIVE

VOCABULARY **REVIEW &**

State the objective(s).

You've already learned this digraph. The sound /sh/ is spelled using two letters—s and h—that work together to make a new sound, /sh/. In this lesson, you will learn how to read words containing /sh/ spelled sh.

Review prerequisite skills and teach related vocabulary.

Review, if needed: A consonant digraph is two or three consonants that work together to create a new sound. In a consonant digraph, the new sound may be completely different than the sound of the letters used to spell it. For example, in the digraph we will be learning in this lesson, the letter s, which usually says /sss/, and the letter h, which usually says /h/, work together to create a completely different sound: /sh/.

Date:

Demonstrate. Teach the new skill, model with clear explanations, verbalize your thinking process.

Display or hold the sound-spelling card for sh. Let's review.

- Point to the picture. The sound is /sh/, as in the word ship. What/s the sound? Students: /sh/
- Point to the spelling pattern at the bottom of the card. /sh/ is spelled sh. What's the spelling for /sh/? Students: sh

Now, watch and listen as I sound out and read some words containing /sh/ spelled sh.

Write the word *bash* on the board.

First, I look for parts I know. I'll underline the vowel. Underline *a* and say /ăăă/. I'll put a dot under each consonant sound I know. If I see two consonants that work together to make a new sound—a digraph—I'll put one dot under the pair of letters, because I know they only make one sound. Put a dot under *b* and say /b/; put a dot under *sh* and say /sh/.

Now, I'll sound out the word, beginning on the left: /b/ /ăăă/ /sh/. Bash!

Teacher Tip: If students need extra support in the pronunciation of a sound, incorporate the "Additional support" section at the end of this activity.

WE DO ITI

Provide guided practice. Distribute student whiteboards, markers, and erasers. Let's read some words together. If you know the word, don't say it aloud. Pretend you haven't seen it before. Write the word *shock* on the board. Write this word on your board (or, make your board look like mine). Step 1 is Look for parts you know. • Underline the vowel. Say the sound it makes. Students and teacher underline o and say /ŏŏŏ/. • Dot under each consonant sound and say the sound it makes. Remember, if you see two consonants that work together to say one sound, put one dot under the pair. Students and teacher put dots under sh and ck and say the sounds they make. Step 2 is Sound it out. • Sound it out, beginning on the left. Students and teacher: /sh/ /ŏŏŏ/ /k/. • What's the word? Students and teacher: *shock* Step 3 is Check it. • Does it sound like a real word? Have you heard it before? • If you found the word in a sentence, you would read the sentence again and see if it makes sense. Repeat the routine 2-3 times with words from the Word List: Word List flush ship mesh

Provide independent practice.

This time, you'll do it independently. I'll remind you of the steps to take, if needed. I'll call on one person to read the word aloud.

Write the word *stash* on the board. Write this word on your board (or, *make your board look like mine*).
Prompt, if needed. Step 1 is Look for parts you know.
Prompt, if needed. Step 2 is Sound it out.
Prompt, if needed. Step 3 is Check it.

(Student name), what's the word? Selected student responds.

Continue the routine using words from the Word List:

Word List	
slosh	
brush	
sham	
swish	
stash	

Assess students (formally or informally). Determine the level of mastery for the stated objective.

Observe individual students as they respond during guided and independent practice. Scaffold or correct all errors. Provide specific feedback for accurate responses.

ASSESS

Additional support. Teach students how and where the sound is made. Allow them to use handheld mirrors with the lesson, if available.

Sound	Where	What	How
/ch/	Tongue in the middle of	Tongue, teeth, lips Voice off	Voice off
/sh/	mouth, teeth touching		

Students may benefit from understanding how and where a letter-sound is made. Teaching the shape of the mouth, the articulators (the parts of the mouth that block the flow of air when making sounds), and the voice can aid in correct pronunciation of each sound. Here's a sample lesson:

The name of this digraph is *sh*. The sound it makes is /sh/. The spelling for /sh/ is *sh*. Remember, /sh/ is a sound that can be held.

When I make the sound /sh/, my mouth looks like this. Model the shape of your mouth as you make the sound /sh/. Can you make your mouth look like mine? If possible, let students use handheld mirrors to check the shape of the mouth.

When I make the sound /sh/, my tongue is in the middle of my mouth, and my teeth may touch towards the back. My mouth is open a little, and I slowly push air out to say /sh/. Can you feel the position of your tongue and teeth when you make the sound /sh/? Think of when you would like someone to be quiet – you say /sh/. Again, let students use handheld mirrors, if available.

When I make the sound /sh/, my voice is off. I don't use my voice to make the sound /sh/. If I put my hand on my throat when I make the sound /sh/, I can't feel a vibration. Put your hand on your throat and say the sound /sh/. Do you feel a vibration?

Enrichment/Extension. *Provide enrichment and extension activities for students who need less support.*

For students who show mastery of sound-spelling correspondences, work toward automaticity of blending and segmenting words with known graphemes. Also consider moving to the instructional protocol for encoding words with digraph *sh*.
